

Data Security Kit(E) Operation Guide

Introduction

This Setup Guide explains the procedures for installing and operating the optional Data Security Kit (E) (hereinafter called Security Kit) and the procedure for system initialization.

Organization administrators should read and understand this manual.

- Nominate a reliable person for the machine administrator when installing the security kit.
- Sufficiently supervise the nominated administrator so that it can observe the security policy and operation rules at the organization to which it belongs and properly operate the machine in accordance with the operation guide of the product.
- Sufficiently supervise the general users so that they can operate the machine while observing the security policy and operation rules at the organization to which they belong.

Instructions for General Users (for Both General Users and Administrators)

Security Kit Functions

The security kit enable overwriting and encryption.

NOTE: If you install the security kit, *Running security function...* appears when the machine starts up and it may take a while.

Overwriting

Multi-functional products (MFPs) temporarily store the data of scanned originals and print jobs, as well as other data stored by users, on the hard disk/SSD, and the job is output from that data. As the data storage areas used for such data remain unchanged on the hard disk/SSD until they are overwritten by other data, the data stored in these areas is potentially restorable using special tools.

The security kit delete and overwrite (hereinafter collectively referred to as *overwrite(s)*) the unnecessary data storage area used for the output data or deleted data to ensure that data cannot be restored.

Overwriting is performed automatically, without user intervention.

CAUTION: When you cancel a job, the machine immediately starts overwriting the data that was stored on the hard disk/SSD.

Overwrite Methods

Changing the data overwrite method is available, when a hard disk is installed. There are two overwrite methods, which can be switched at any time.

Once Overwrite Method

This function overwrites unneeded data areas (in the case of overwriting) or all the data areas (in the case of system initialization) with specific numbers to prevent data restoration.

3-time Overwrite Method (A) (default)

This overwrite method complies with DoD 5220.22-M, and overwrites unneeded data areas (in the case of overwriting) or all the data areas (in the case of system initialization) with specific numbers, their complements, and random numbers to prevent data restoration. Data restoration is not possible even through a sophisticated restoration technique.

This method may take more time than Once Overwrite method to process a larger amount of data.

Encryption

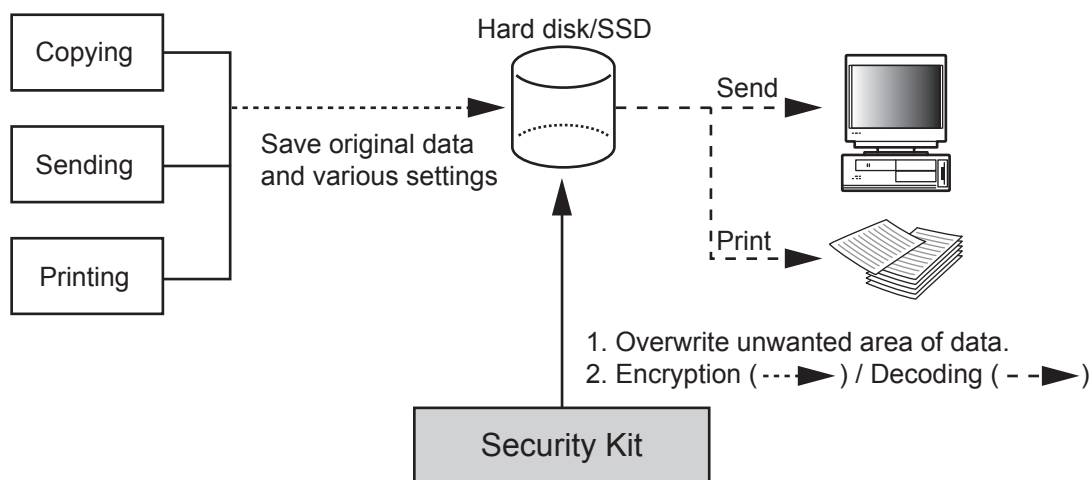

MFPs store the data of scanned originals and other data stored by users in the hard disk/SSD. It means the data could be possibly leaked or tampered with if the hard disk/SSD is stolen.

The security kit encrypt data before storing it in the hard disk/SSD. It guarantees higher security because no data cannot be decoded by ordinary output or operations.

Encryption is automatically performed and no special procedure is required.

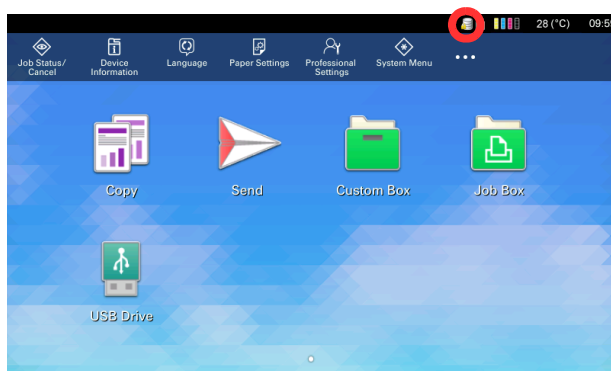

CAUTION: Encryption helps enhance security. However, the data stored in the Document Box can be decoded by ordinary operations. Do not store any strictly confidential data in the Document Box.

Security Kit

Touch Panel Display after the Security Kit are Installed

Hard Disk Icon Display

In Security Mode, the security kit have been properly installed and is running. The hard disk icon appears on the lower right side of the touch panel in Security Mode.

NOTE: If the hard disk icon does not appear on the normal screen, it is possible that the Security Mode is not ON. Call service.

The hard disk icon display changes as follows during overwriting

The table below shows the icons displayed and their descriptions.

Icon displayed	Description
	There is unneeded data on the hard disk/SSD.
	Overwriting the unwanted data
	The unwanted data is overwritten.

CAUTION: Do not turn the power switch off while  is displayed. Risk of damage to the hard disk/SSD.

NOTE: If you turn the machine off at the power switch during overwriting, data may not be overwritten completely from the hard disk. Turn the machine back on at the power switch. Overwriting automatically resumes. If you accidentally turn the main power switch off during overwriting or initialization, the hard disk icon might not switch to the second icon shown above. This would be caused by a possible crash or failed overwriting of the data to be overwritten. This will not affect subsequent overwriting processes. However, hard disk initialization is recommended so as to return to normal stable operations. (Initialization should be performed by the administrator following the steps in *System Initialization on page 15.*)

Instructions for Administrators (for Those in Charge of Installation and Operations of the Security Kit)

If any kind of problem occurs in the installation or use of the security kit, contact your dealer or service technician.

Installing the Security Kit

The Security Kit Contents

The security kit package includes:

- License Certificate
- Installation Guide (for service personnel)
- Notice

In case of the standard specification, there will be no bundled items included.

Before Installation

- Make sure that the service representative must be a person who belongs to the supplying company.
- Install the machine in a safe location with controlled access, and unauthorized access to the machine can be prevented.
- The hard disk/SSD will be initialized during installation of the security kit. This means that the data stored in the hard disk will be all overwritten. Special attention should be given if you install the security kit on the MFP currently used.
- The network to which the machine is hooked up must be protected by a firewall to prevent extraneous attacks.
- The Repeat Copy function will be unavailable after the installation.
- [Adjustment/Maintenance] > *Others* [Restart/Initialization] > [System Initialization] will not be displayed in the *System Menu* after the installation.
- When installing the security kit, change the machine settings as follows.

Item		Value	
System Menu	Device Settings	Date/Time	Set the date and time.

Installation

Installation of the security function is performed by the service person or the administrator. The service person or the administrator should log in the system menu to enter the encryption code.

Encryption Code

An encryption code of 8 alphanumeric characters (0 to 9, A to Z, a to z) to encrypt data needs to be entered. By default, the code is set *00000000*.

As an encryption key is then created from this code, it is safe enough to continue using the default code.

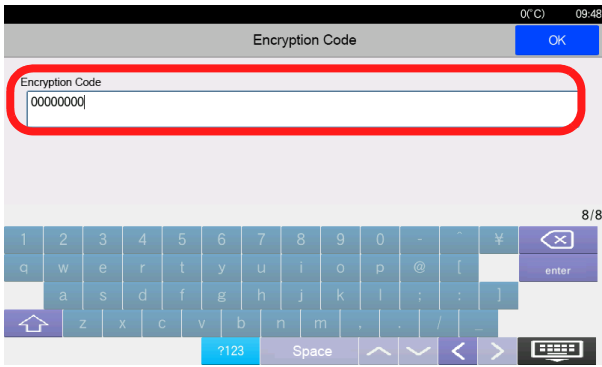

CAUTION: Be sure to remember and securely manage the encryption code you entered. If you need to enter the encryption code again for some reason and you do not enter the same encryption code, all the data stored on the hard disk/SDD will be overwritten as a security precaution.

Installation Procedure

Use the procedure below to select the interface.

- 1 Press the [System Menu/Counter] key.
- 2 Press [Activate Ext. Function].
- 3 Press [Optional Function List] of *Optional Function*.

If user login is disabled, the user authentication screen appears. Enter your login user name and password and then press [Login]. For this, you need to log in with administrator privileges. Refer to the machine's Operation Guide for the default login user name and password.
- 4 The optional function screen is displayed. Select [DATA SECURITY KIT(E)] and press [Activate].
- 5 The screen for entering the licence key is displayed. Enter the Licence Key using the numeric keys and then press the [Official].
- 6 When the confirmation screen appears, press [Start].
- 7 This function will be activated. The data saved in the large capacity storage will be deleted and the storage will be formatted and encrypted. If there is no problem, press [OK].
- 8 Turn the power switch on again following to the indication in the panel screen.
- 9 The screen for entering the encryption code is displayed. If you want to change the encryption code, change it by the following procedure. If the encryption code is not changed, go to the procedure 12.

- 10 Press [Encryption Code].
- 11 Press [ (Backspace)] and enter the 8-digit numeric encryption code (0 to 9) after erasing [00000000], and press [enter].
- 12 Press [OK]. Hard disk/SSD formatting begins.
- 13 When formatting finishes, follow the on screen instructions to turn the Power Switch off and on again.
- 14 After the opening screen is displayed, confirm that a hard disk icon (Overwritten completion icon of unnecessary data in the hard disk) is shown in the lower right corner of the screen.

After Installation

Change the machine setting as follows to securely operate it. If the system in the machine is initialized, it returns to the settings before installation, so make changes in the same way. If you allow service personnel to conduct maintenance operations, confirm the set values.

Items changed in Command Center RX

Item					Value	
Device Settings	Energy Saver/Timer	Energy Saver/Timer Settings		Timer Settings	Auto Panel Reset	On
					Panel Reset Timer	Setting any value
Function Settings	Printer	Printer Settings	General		Remote Printing	Prohibit
Network Settings	TCP/IP	TCP/IP Settings		Bonjour Settings	Bonjour	Off
				IPSec Settings	IPSec	On
					Restriction	Allowed
		IPSec Rules ("Settings" selection of any of Rule No.)	Policy		Rule	On
					Key Management Type	IKEv1
					Encapsulation Mode	Transport
			IP Address		IP Version	IPv4
					IP Address(IPv 4)	IP Address of the destination terminal
					Subnet Mask	Setting any value
			Authentication	Local Side	Authentication Type	Pre-shared Key
					Pre-shared Key	Setting any value
			Key Exchange (IKE phase1)			Setting any value(Always the Mode selects the Main mode)
			Data Protection (IKE phase2)			Setting any value(Always the Protocol selects the ESP)

Item			Value				
Network Settings	Protocol	Protocol Settings	Print Protocols	NetBEUI	Off		
				LPD	Off		
				FTP Server (Reception)	Off		
				IPP	Off		
				IPP over SSL	On		
				IPP Authentication	Off		
				Raw	Off		
				WSD Print	Off		
				POP3 (E-mail RX)	Off		
				Send Protocols	SMTP (E-mail TX)	On	
					FTP Client (Transmission)	On	
					SMB	Off	
					WSD Scan	Off	
					eSCL	Off	
					eSCL over SSL	Off	
					Other Protocols	SNMPv1/v2c	Off
						SNMPv3	Off
						HTTP	Off
						HTTPS	On
						Enhanced WSD	Off
						Enhanced WSD(SSL)	On
						LDAP	Off
						IEEE802.1X	Off
						LLTD	Off
						REST	Off
						REST over SSL	Off

						VNC(RFB) over SSL	Off
						Enhanced VNC(RFB) over SSL	Off

Item					Value		
Security Settings	Device Security	Device Security Settings	Edit Restriction		Address Book	Administrator Only	
					One Touch Key	Administrator Only	
			Authentication Security Settings	Password Policy Settings	Password Policy	On	
					Maximum password age	Setting any value	
					Minimum password length	On 8 or more characters	
					Password complexity	Setting any value	
					User Account Lockout Settings	Lockout Policy	On
						Number of Retries until Locked	Setting any value
						Lockout Duration	Setting any value
						Lockout Target	All
	Network Security	Network Security Settings	Secure Protocol Settings	SSL		On	
				Serverside Settings		TLS Version	SSL3.0/TLS1.0: Disable TLS1.1: Disable TLS1.2: Enable
						Effective Encryption	ARCFOUR: Disable, DES: Disable, 3DES: Enable, AES: Enable, AES-GCM: Setting any value
						HTTP Security	Secure Only (HTTPS)
						IPP Security	Secure Only (IPPS)
				Enhanced WSD Security	Secure Only (Enhanced WSD over SSL)		
Clientside Settings				TLS Version	SSL3.0/TLS1.0: Disable TLS1.1: Disable TLS1.2: Enable		
				Effective Encryption	ARCFOUR: Disable, DES: Disable, 3DES: Enable, AES: Enable, AES-GCM: Setting any value		
				Certificate Verification	On		

Item			Value		
Management Settings	History Settings	History Settings	Job Log History	Recipient E-mail Address	E-mail Address for the administrator of the machine
				Auto Sending	On
			Login History Settings	Login History	On
				Recipient E-mail Address	E-mail Address for the administrator of the machine
				Auto Sending	On
			Device Log History Settings	Device Log History	On
				Recipient E-mail Address	E-mail Address for the administrator of the machine
				Auto Sending	On
			Secure Communication Error Log History Settings	Secure Communication Error Log History	On
				Recipient E-mail Address	E-mail Address for the administrator of the machine
				Auto Sending	On

Items changed on the machine

Item			Value	
System Menu	Security Setting		Security Level	Very High
	Function Settings	Internet Browser	Internet Browser	Off

For the procedures for changing the settings, refer to the machine OPERATION GUIDE and Command Center RX User Guide.

After changing the settings, run [Software verification] in the system menu to verify that the machine operates correctly. Periodically perform [Software verification] after installation as well.

After installing the security kit, you can change the security password as well as the method for overwriting the entire hard disk.

Refer to *page 13* for the procedures.

The administrator of the machine should periodically store the histories, and check each history to make sure there was no unauthorized access or abnormal operation.

Grant regular users permission based on your company rules, and promptly delete any user accounts that stop being used due to retirement or other reasons.

IPsec setting

It is possible to protect data by enabling the IPsec function that encrypts the communication path.

Please note the following points when enabling the IPsec function.

- The value set by the IPsec rule has to be matched with the destination PC. Communication error occurs in case the setting does not match.
- IP address set by the IPsec rule has to be matched with the IP address of the SMTP server or FTP server which is set on the main unit.
- In case the setting does not match, data sent by mail or FTP can't be encrypted.
- Pre-shared key set by the IPsec rule has to be created by using the alphanumeric symbols of 8 digits or more which will not be easily guessed.

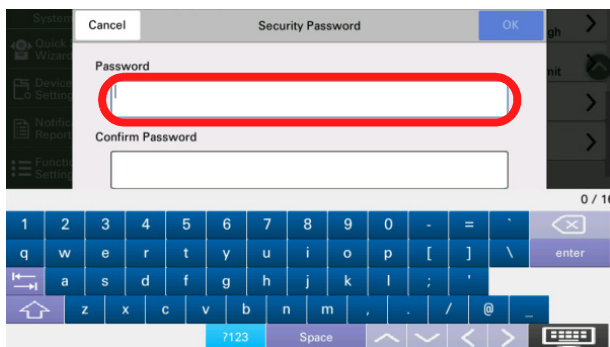

Changing Data Security Functions

Changing Security Password

Enter the security password to change data security functions. You can customize the security password so that only the administrator can use the security kit.

Use the procedure below to change the security password.

- 1 Press the **[System Menu/Counter]** key.
- 2 Press [Data Security] > *Device Security Settings* [Data Security].
- 3 If user login is disabled, the user authentication screen appears. Enter your login user name and password and then press [Login]. For this, you need to log in with administrator privileges. Refer to the *machine's Operation Guide* for the default login user name and password.
- 4 Press [Hard Disk Initialization].
- 5 Enter the default security password, *000000* and press [OK].
- 6 Press [Security Password].
- 7 Enter a new security password in *Password* 6 to 16 alphanumeric characters and symbols.

CAUTION: Avoid any easy-to-guess numbers for the security password (e.g. 11111111 or 12345678).

- 8 Enter the same password again in *Confirm Password*.
- 9 Press [OK].

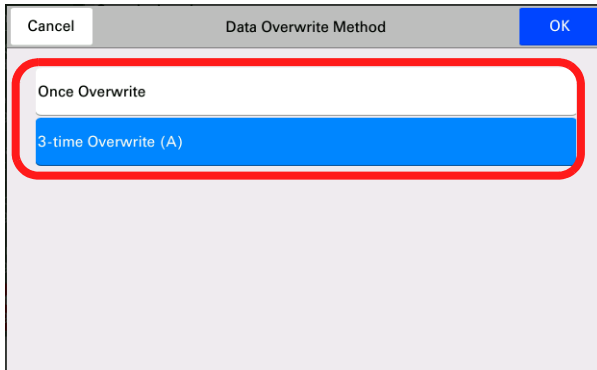

Changing the Data Overwrite Method

The method used to overwrite data can be changed. Refer to *Overwriting on page 2* for details. Changing the data overwrite method is not available, when a hard disk is not installed.

NOTE: The overwrite methods are used both for overwriting and hard disk initialization, and cannot therefore be set individually.

Use the procedure below to select the interface.

- 1 Press the [**System Menu/Counter**] key.
- 2 Press [Data Security] > *Device Security Settings* [Data Security].
- 3 If user login is disabled, the user authentication screen appears. Enter your login user name and password and then press [Login]. For this, you need to log in with administrator privileges. Refer to the *machine's Operation Guide* for the default login user name and password.
- 4 Press [Hard Disk Initialization].
- 5 Enter the security password and press [OK]. By default, the code is set *000000*.
- 6 Press [Data Overwrite Method].
- 7 Press [3-time Overwrite (A)] (default) or [Once Overwrite].
- 8 Press [OK].

System Initialization

Overwrite all the data stored in the system when disposing of the machine.

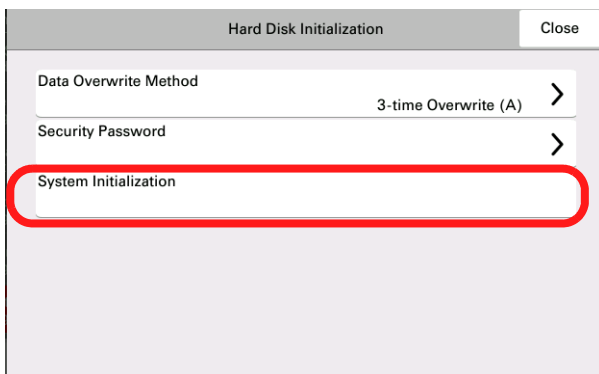

CAUTION: If you accidentally turn the power switch off during initialization, the system might possibly crash or initialization might fail.

NOTE: If you accidentally turn the power switch off during initialization, turn the power switch on again. Initialization automatically restarts.

Use the procedure below to initialize the system.

- 1 Press the [**System Menu/Counter**] key.
- 2 Press [Data Security] > *Device Security Settings* [Data Security].
- 3 If the user authentication screen appears, enter the login user name and login password, and press [Login].

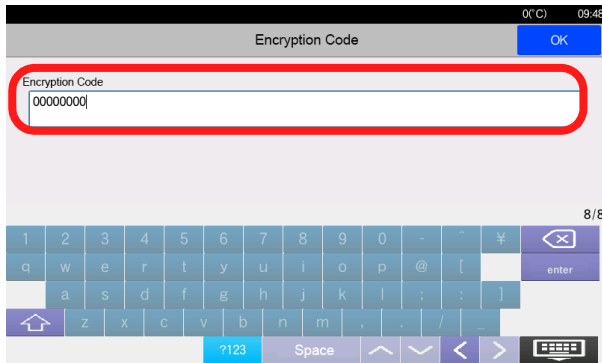

For this, you need to log in with administrator privileges. If the user authentication screen does not appear, go to Step 4.
- 4 Press [Hard Disk Initialization].
- 5 Enter the default security password, *000000* and press [OK].
- 6 Press [System Initialization].
- 7 Press [Initialize] on the screen to confirm the initialization. Initialization starts.
- 8 When the screen appears to show initialization is completed, turn the power switch off and then on.

Warning Message

If the encryption code information of the machine has been lost for some reason, the screen shown here appears when the power is turned on.

Follow the steps below.

- 1 Press [Encryption Code], and enter the encryption code that was entered during the installation of the security kit.

CAUTION: Even though entering a different encryption code can also enable continuation of a job, this will overwrite all the data stored in the hard disk/SSD. Exercise extreme caution when entering an encryption code.

The encryption code is not the same as the security password.

- 2 Turn the power switch off and on.

Disposal

If the machine is unused and demolished, initialize the system of this product to erase the hard disk/SSD data.

If the machine is unused and demolished, obtain directions for disposal from the dealer (from which you purchased the machine) or your service representative.

Appendix

List of factory default settings

The default settings for security mode are shown below.
